

Git Avançado

Jean Carlo Machado

Sobre

CompuFácil

Unix fag

→ php-src

→ git/git

→ torvald/linux

→ vim/vim

→ Doctrine

→ Zend Framework

→ phpunit

Git básico

```
git pull  
git add .  
git commit -m ""  
git push
```

Além

```
ls /usr/lib/git-core/ | wc -l  
173
```

Patches

- Extrair
- Importar
- Alterar
- Usar para deploys

Comandos que geram diff

`git show`

`git diff`

`git format-patch`

`git log`

Reescrita

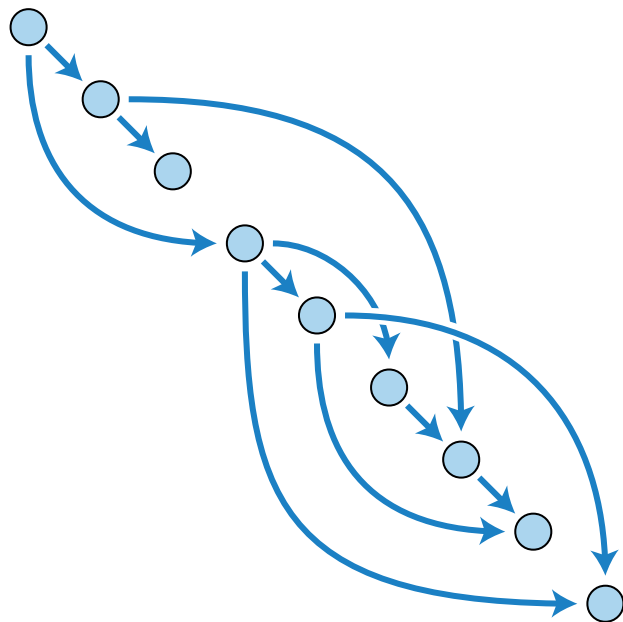

Bisect

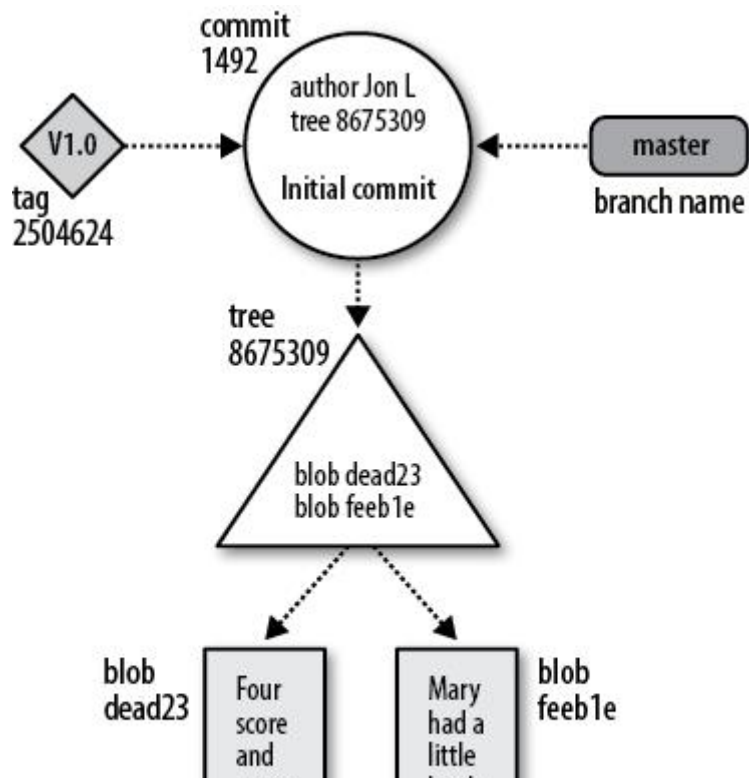

Rerere

reuse recorded resolution

Código movido

Pumbling

Blob

```
$content = "hi there";  
$header = "blob ".strlen($content)."\0";  
$store = $header.$content;  
$sha1 = sha1($store);  
$path = '.git/objects/'  
        .substr($sha1, 0, 2)  
        .'/' .substr($sha1, 2);  
$compressedContent = gzcompress($store);  
if (!file_exists(dirname($path))) {  
    mkdir(dirname($path));  
}  
file_put_contents($path, $compressedContent);
```
